DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

2. Claims 1, 4-16, 67-68 are allowed over the prior art of record.
3. The following is an examiner's statement of reasons for allowance:
4. In view of applicant's remarks dated 9/25/2009 and further search of the invention the claims are allowed for the reasons below:

Regarding claim 1 the prior art fails to disclose or make obvious a method of determining, in a fluid sample a presence of particles having a substantially predetermined size or a substantially predetermined range of sizes having the steps of illuminating the sample in the chamber with a first wavelength of substantially horizontally and/or vertically polarized light, obtaining a first response signal indicative of the first illumination, illuminating the sample in the chamber with a second wavelength of light, obtaining a second response signal indicative of the second illumination, and determining the presence of the particles having the size or range of sizes by subtracting the first signal from the second signal, and in combination with the other recited limitations of claim 1. Claims 4-14 are allowed by the virtue of dependency on the allowed claim 1.

Regarding claim 15, the prior art fails to disclose or make obvious a particle monitor adapted to determine in a fluid sample in a chamber the presence of particles having a predetermined range of size(s) having first illumination means for illuminating the sample in the

Art Unit: 2886

chamber with a first wavelength of substantially horizontally and/or vertically polarized light, the first light being of a wavelength to which particles of a first size(s) are relatively responsive, a first signal means for providing a first signal indicative of the first illumination, second illumination means for illuminating the sample in the chamber with a second wavelength of light, the second light being of a wavelength to which particles of a second size(s) are relatively responsive, a second signal means for providing a second signal indicative of the second illumination, and logic means for determining the presence of the particles in the predetermined range by subtracting the first signal from the second signal, and in combination with the other recited limitations of claim 15. Claim 68 is allowed by the virtue of dependency on the allowed claim 15.

Regarding claim 16, the prior art fails to disclose or make obvious an apparatus to detect in a fluid sample in a chamber particles having a predetermined range of sizes having illuminating the sample in the chamber with a first wavelength of substantially horizontally and/or vertically polarized light, obtaining a first response signal indicative of the first illumination, illuminating the sample in the chamber with a second wavelength of light, obtaining a second response signal indicative of the second illumination, and determining the presence of the particles having the size or range of size(s) by subtracting the first signal from the second signal, and in combination with the other recited limitations of claim 16. Claim 67 is allowed by the virtue of dependency on the allowed claim 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
